- relocations

About us

We are a company that was born out of passion and years of experience in improving production processes. Progressive thinking combined with many years of experience allows us to take up more and more new challenges. Our team consists of qualified specialists, whose number, along with the growth of the company, is successively increasing. We operate comprehensively, from the idea, through the production of the finished product, to assembly at the client's place. We are technically advanced and focused on the highest quality of our services. We build our portfolio on the basis of cooperation with leaders in the automotive, electronic and machinery markets.

The KUKA logo is displayed in a bold, orange, sans-serif font.

Relocations

We have extensive experience in relocating machinery, production lines, and entire manufacturing plants across Poland and Europe. Our services are fully comprehensive—we manage every stage of the process, from initial planning and design to disassembly, preparation for transport, shipping, unloading, installation, and setup at the destination.

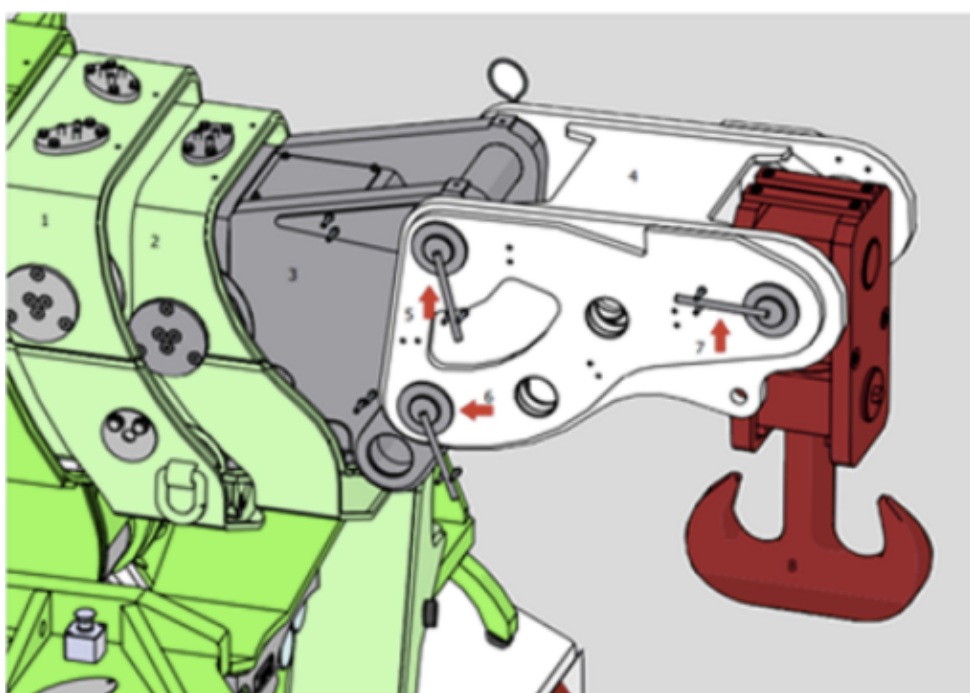

We also handle utility connections and final commissioning, ensuring smooth and efficient startup. With proven expertise, we successfully execute even the most complex relocation projects.

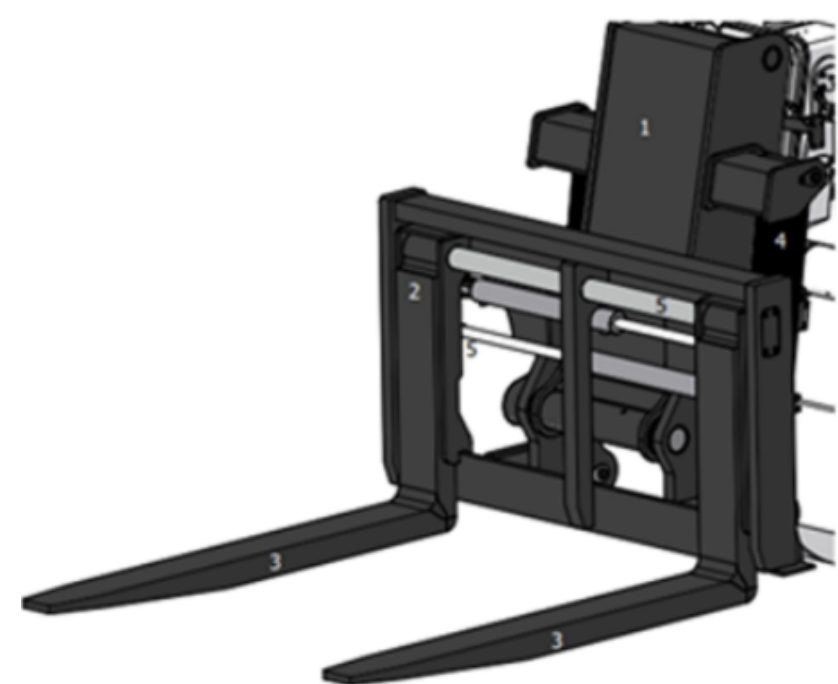

Electric crane
JMG 580S
Pick & Carry
lifting capacity 58T

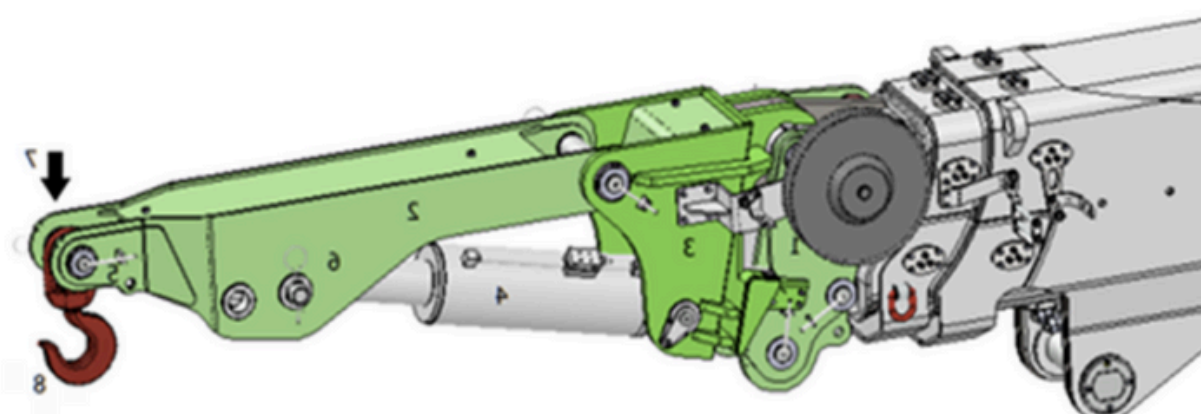

Electric crane
JMG 400s
Pick & Carry
lifting capacity 40T

Mechanical tilting head with
direct hook – load capacity 58 t

Forks – load capacity 26 t

Hydraulic jib – load capacity 15 t

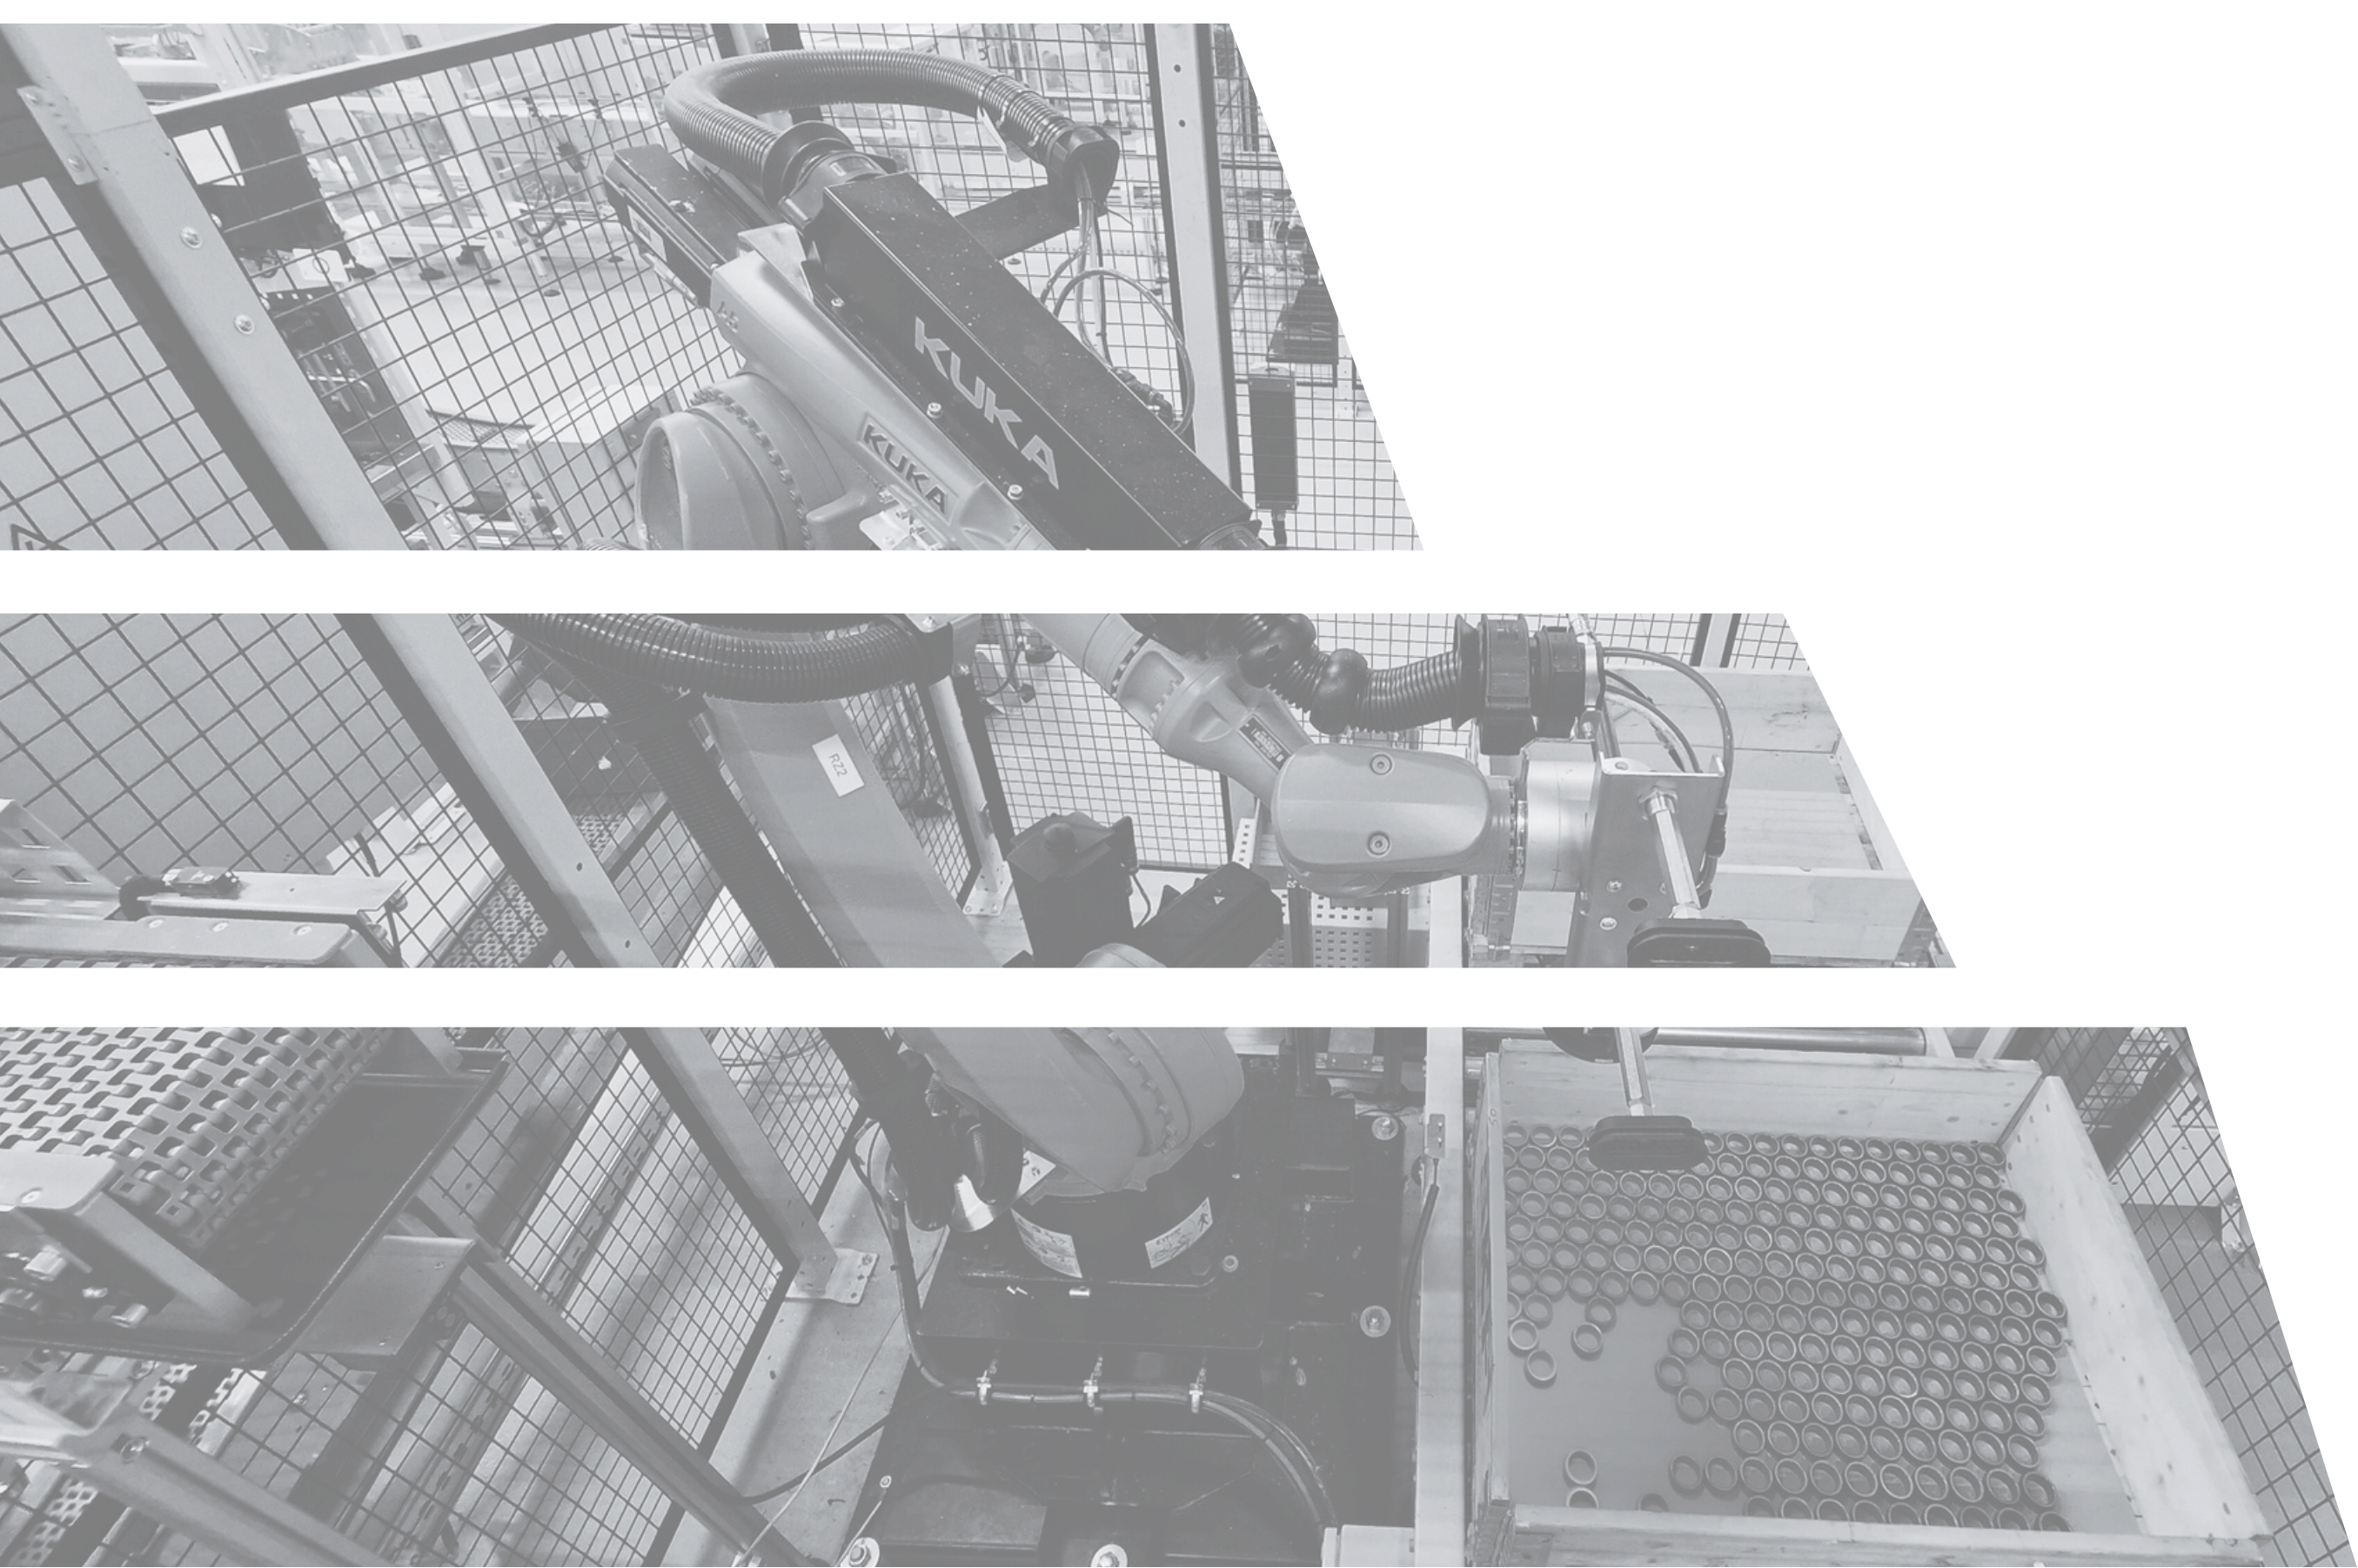

Our projects

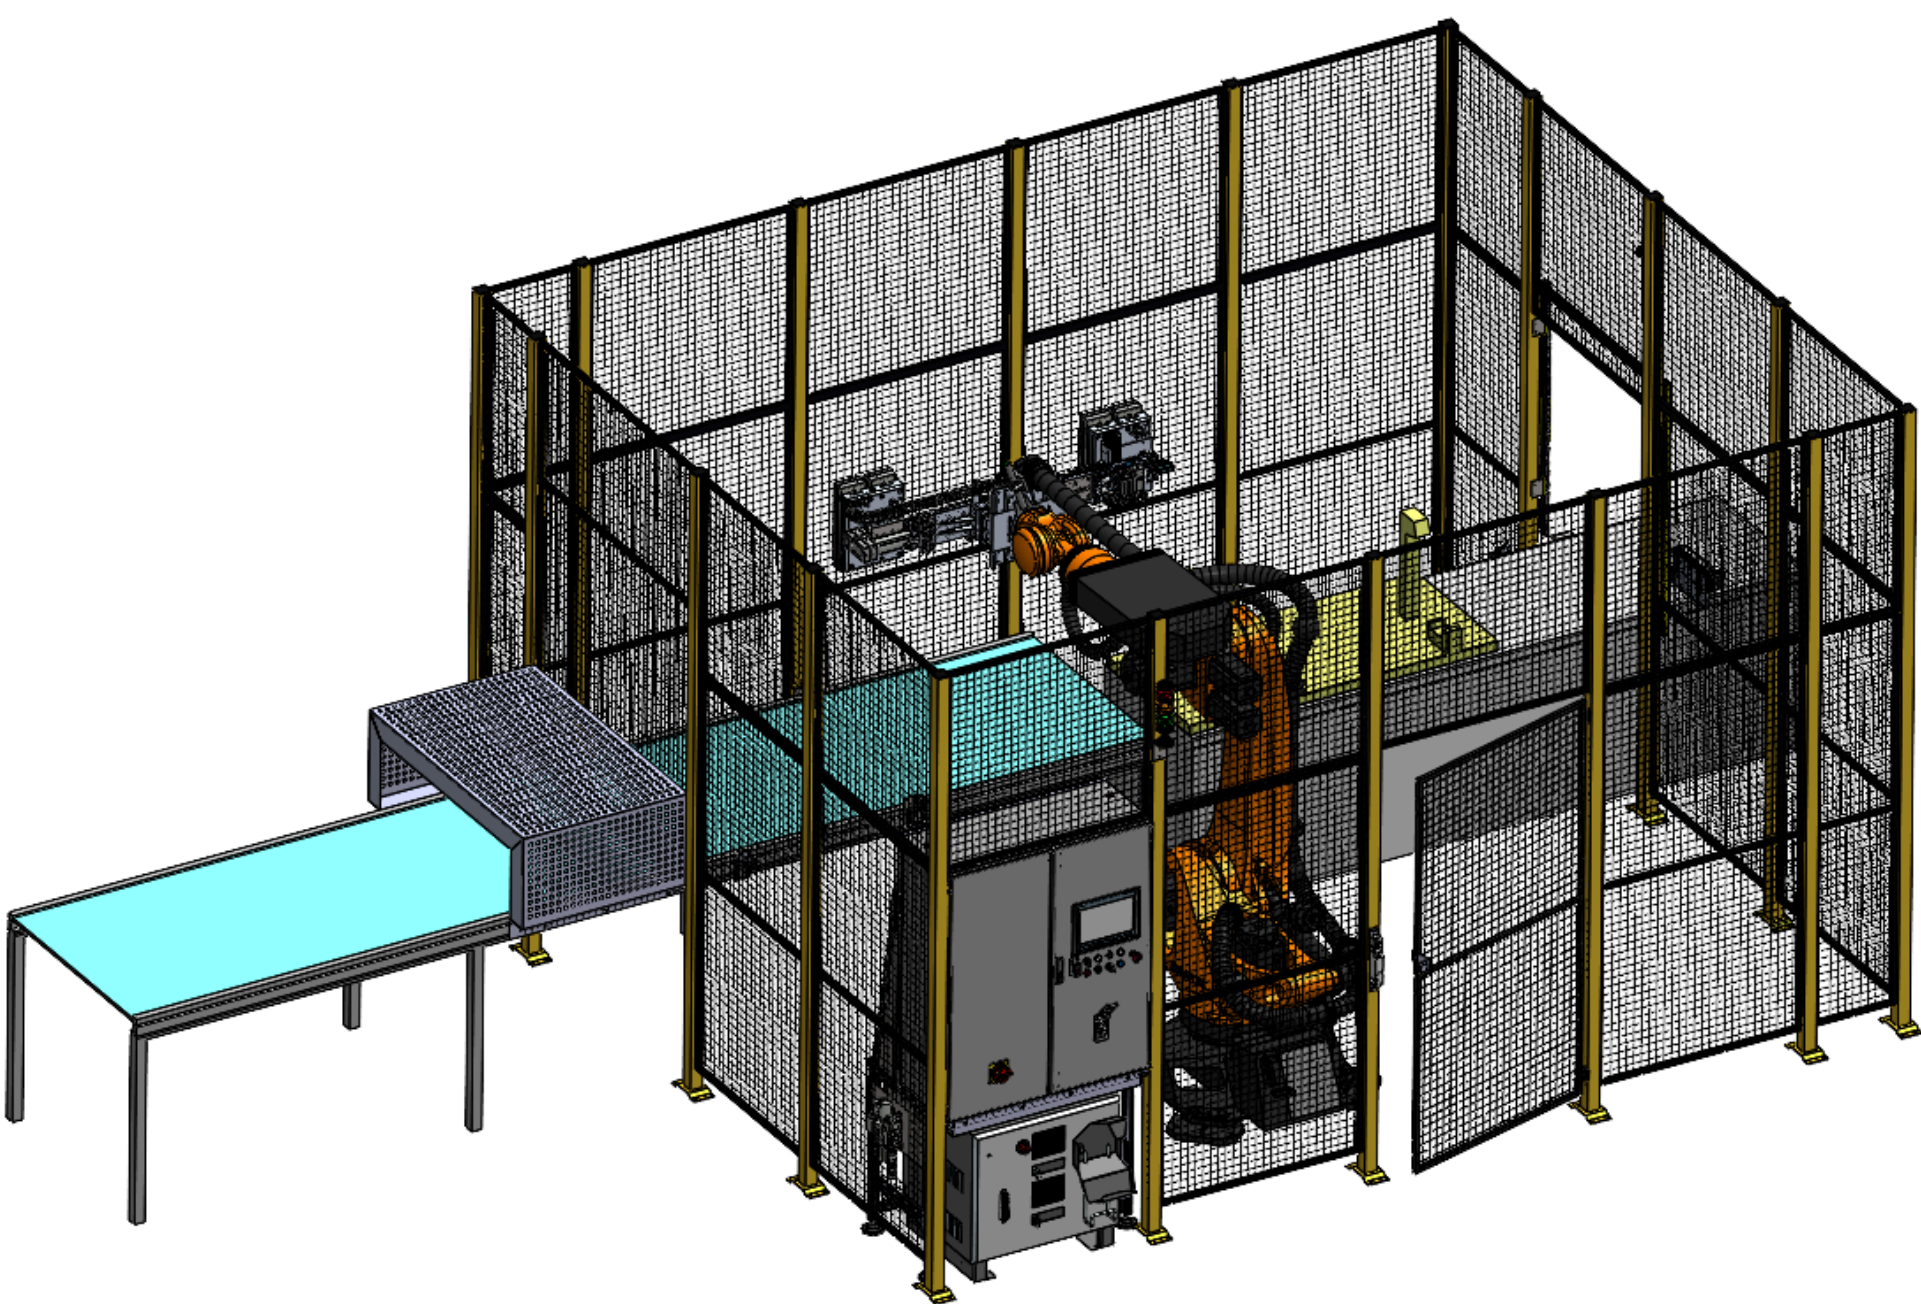

Machine construction: automation & robotics

We specialize in comprehensive solutions for industrial automation, robotics, machine construction, and modernization of production systems. We design and implement automation systems, assembly lines, and robotized workstations, ensuring higher efficiency, quality, and cost optimization. Our services include:

- Automation & Robotics – design, programming, integration, and optimization of production processes with robots and automated systems.
- Machine Construction – from concept and 3D design in SOLIDWORKS to assembly and commissioning at the client's site.
- Control Systems – design, prefabrication, and installation of control cabinets and switchboards based on EPLAN Electric P8.
- Modernization & Service – upgrades, repairs, and extensions of machines and production lines, including hydraulic, pneumatic, cooling, and control systems.

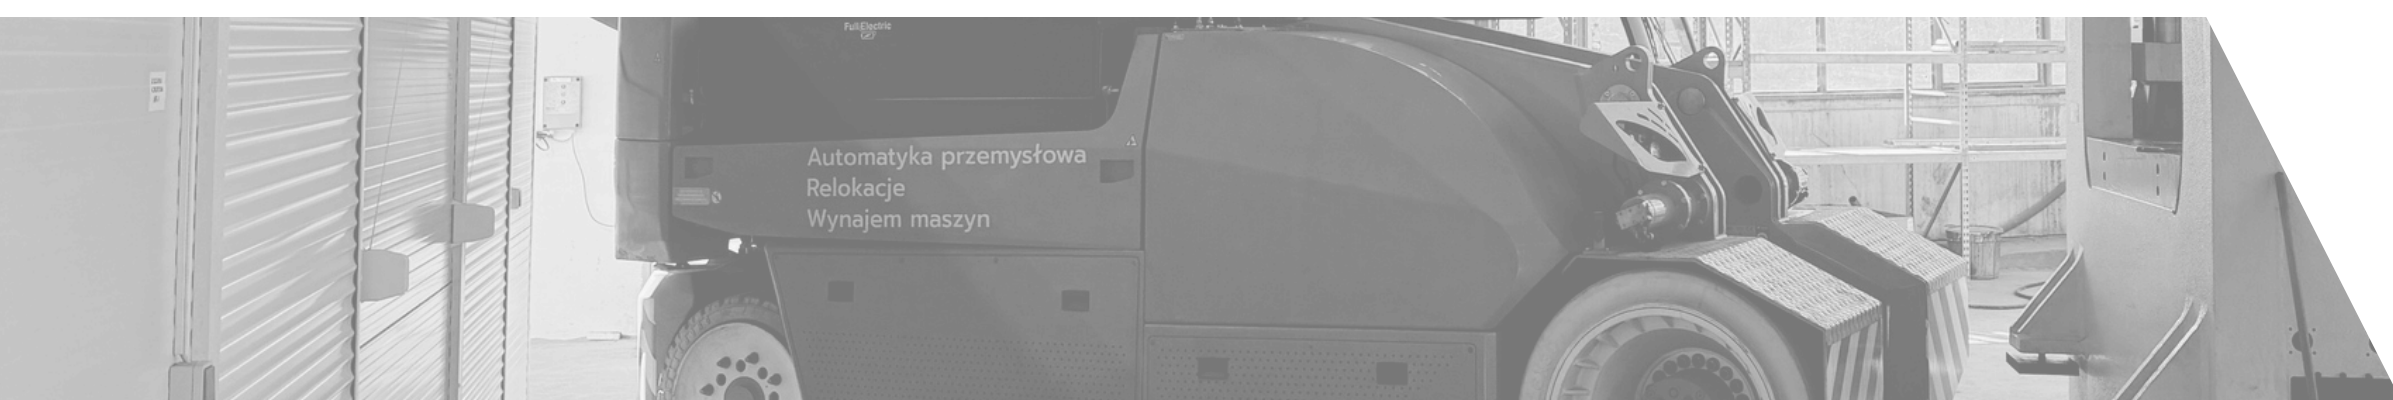

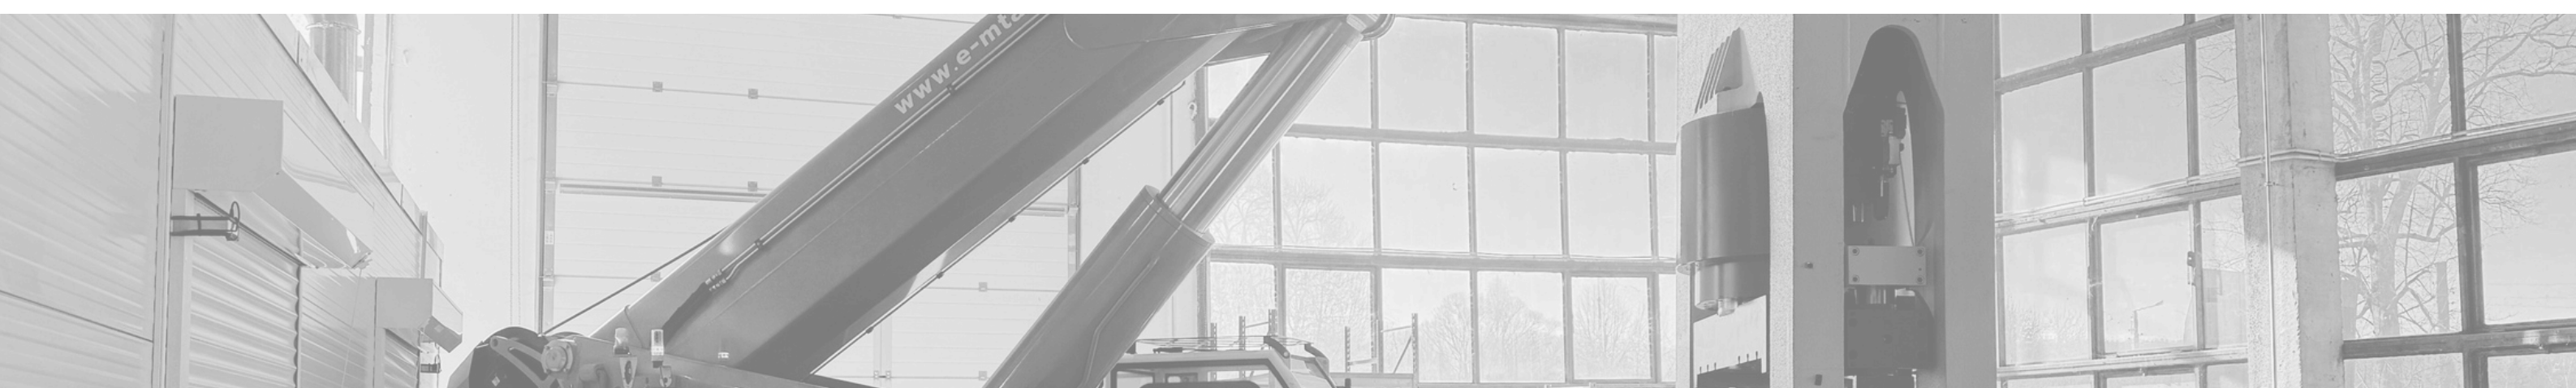

Our projects

Other services

- Industrial installations and general consultancy
- Audits and adaptation of machines/lines to safety requirements
- Hazard analysis, risk assessment, and technical documentation
- Fiber laser cutting of steel, stainless steel, and aluminum
- CNC sheet metal bending up to 3200 mm / 220 tons
- Design, construction, and commissioning of production lines
- Expansion with robotic workstations
- Laserowe Ogrody – laser-cut metal fence panels and balustrades
